

Colorbond

The Signwhite colourbond is made from a composition of metals, it is .55mm thick which makes it relatively light and can be folded and cut. As not all colourbond is paint receptive the signwhite with its white paint coating is.

It is used widely in the sign and building industry. Colourbond can be drilled, riveted, glued or nailed to frames or walls as required.

Weathertex

The weathertex signboard is made from exterior grade wood fibre with a factory applied white primer coating. It is 9.5mm thick and can be easily cut, machined, routed or shaped using standard woodworking tools. Common applications for weathertex signboard include shaped or flat panel signs, display, linings and advertising to name just a few. The sheets can be screwed, glued or nailed to walls, timber or metal frames.
