Avery Dennison® SF 100 Fluorescent

Cast Fluorescent Film

Features

- · Bright colours that provide high visibility
- · Excellent adhesion to a wide variety of substrates
- Excellent dimensional stability
- Up to 6 months outdoor durability

Description

Film: 56 micron high gloss fluorescent cast vinyl

Adhesive: Permanent acrylic

Backing: One side coated bleached Kraft paper

Outdoor life: Up to 6 months Asia Pacific

Colours: 7 standard

Conversion

□ Screen printing

- Flat bed cutters
 □ Cold overlaminating
 Friction fed cutters □ Estat printing
 □ Die cutting □ Water based inkjet
 □ Thermal transfer □ Solvent inkjet
- Uses

Avery Dennison SF 100 Fluorescent Film is suitable for general high visibility functional and promotional applications where short term outdoor durability is required.

☐ UV Cured inkjet

Common Applications

- Billboards
- · Real estate signs
- · Window graphics
- Warning labels
- Point of purchase

Physical characteristics

General

. ...

Expected Durability **	Vertical exposure only	up to 6 months
Shelf life	Stored at 22° C/50-55 % RH	1 year
Flammability		Self extinguishing
Adhesion, ultimate	FINAT FTM-1, stainless steel	770 N/m
Adhesion, initial	FINAT FTM-1, stainless steel	600 N/m
Dimensional stability	DIN 30646	0.3 mm max
Caliper, facefilm	ISO 534	56 micron

Thermal

Application temperature	Minimum: + 4·C
Temperature range	- 46℃ to + 82℃

Chemical

Resistant to petroleum based oils, greases, and aliphatic solvents Resistant to mild acids, alkalies and salts

Important

Information on physical characteristics is based upon tests we believe to be reliable. The values listed herein are typical values and are not for use in specifications.

They are intended only as a source of information and are given without guarantee and do not constitute a warranty. Purchasers should independently determine, prior to use, the suitability of any material for their specific use.

All technical data is subject to change without prior notice.

Warrantv

Avery Dennison® materials are manufactured under careful quality control and are warranted to be free from defect in material and workmanship. Any material shown to our satisfaction to be defective at the time of sale will be replaced without charge. Our aggregate liability to the purchaser shall in no circumstances exceed the cost of the defective materials supplied. No salesman, representative or agent is authorised to give guarantee, warranty, or make any representation contrary to the foregoing.

All Avery Dennison® materials are sold subject to the above conditions, being part of our standard conditions of sale, a copy of which is available on request.

**Expected Durability

The expected durability of Avery Dennison films are defined as the expected performance life of the Avery Dennison graphic film(s) within the Asia Pacific region, in outdoor vertical exposure conditions.

The actual performance life will depend on a variety of factors, including selection and preparation of substrate, angle and direction of exposure, application methods, environmental conditions and cleaning/maintenance of the films. In case of films used in areas of high temperatures or humidity, high altitudes and industrially polluted areas the performance will be further reduced.

Expected Durability and Warranted Period Definitions

Expected durability is the expected period of time defined in the product data sheet, the product should, but is not warranted to, perform satisfactorily when applied in vertical exposure conditions as defined in Instructional Bulletin 1.30. The warranted period as defined in the appropriate ICS Performance Guarantee Bulletin, is the maximum period of time Avery Dennison will warrant the finished products performance in accordance with ICS Performance Guarantee Terms and Conditions 1.0, provided that the film is properly stored, converted and installed in accordance with Avery Dennison guidelines.

Test Methods

Dimensional stability:

Is measured on a 150 x 150 mm aluminium panel to which a specimen has been applied; 72 hours after application the panel is exposed for 48 hours to + 70°C, after which the shrinkage is measured.

Adhesion:

(FTM-1, FINAT) is measured by peeling a specimen at a 180° angle from a stainless steel or float glass panel, 24 hours after the specimen has been applied under standardised conditions. Initial adhesion is measured 20 minutes after application of the specimen.

Flammability

A specimen applied to aluminium is subjected to the flame of a gas burner for 15 seconds. The film should stop burning within 15 seconds after removal from the flame.

Temperature range:

A specimen applied to stainless steel is exposed at high and low temperatures and brought back to room temperature. 1 hour after exposure the specimen is examined for any deterioration. Note: Prolonged exposure to high and low temperatures in the presence of chemicals such as solvents, acids, dyes, etc. may eventually cause deterioration.

Chemical Resistance:

All chemical tests are conducted with test panels to which a specimen has been applied. 72 hours after application the panels are immersed in the test fluid for the given test period. 1 hour after removing the panel from the fluid, the specimen is examined for any deterioration.

Corrosion Resistance:

A specimen applied to aluminium is exposed to saline mist (5% salt) at 35°C. After exposure, the film is removed and the panel is examined for traces of corrosion.
